

Edge Protections

Edge protections are used when steel edges have to be smooth.

- Additional metal machining work can be avoided and an decorative effect is achieved.
- Edge protection profiles are flexible
- The U-shaped steel clip-on tape with a PVC jacketing provide for film seating on metal edges, even if there are radii or bends.
- The profile is simply pressed onto the metal edge by hand, so there is no need for tools, adhesives or connecting elements.

Material:-

- PVC with steel spring core
